

Any sort of interference and trespassing monitoring with our TALV-TACT

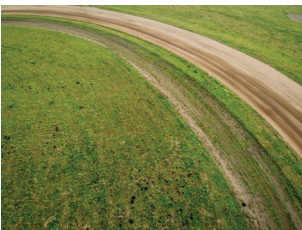

Case Study

Client Overview

The client is a renowned automobile giant in India serving customers across globe.

Business Situation

To mitigate any sort 3rd party trespassing in their large high speed testing tracks.

The Solution

TAS provided the solution with industry best AI enable drone TALV-TACT which comes with a default payload of EO/IR, is BVLOS ready, has GCS runtime of 4-5 hours and has industry best commlinks for extended range. The client could track the live feed and monitor the intrusion over the high speed testing track. This enabled smooth operations within their testing perimeter without any intrusion.

Solution Outcome

- ▶ Drones could enable and increase the safety of the process handled
- ▶ Through the help of automated AI warnings human observance increased like any other method.
